Test Summary Report

Demo Web Shop - Manual Testing

1. Project Information

Project name	Demo Web Shop - Manual Testing
Application URL	https://demowebshop.tricentis.com
Prepared by	Anushka Sakare
Test type	Manual functional testing (positive and negative scenarios)

2. Scope

In scope	User registration, login/logout, product search, wishlist, product comparison, shopping cart, checkout, customer information, address management, order confirmation and order history, category browsing.
Out of scope	Performance testing, security testing, automation testing and mobile app testing.

3. Test Environment

Browser	Google Chrome (latest version)
Operating system	Windows 11
Test data	Self-registered test user, demo products available on the website

4. Execution Summary

Total	Passed	Failed	Blocked	Not Run	Executed	Pass %
10	6	4	0	0	100%	60%

5. Test Case Results

TC ID	Test Scenario	Status	Defect ID
TC_01	New user registration, login, browsing and logout	Fail	BUG-003
TC_02	Login, product search, product details, wishlist	Fail	BUG-005
TC_03	Login, product comparison	Pass	-
TC_04	Login, add to cart, update quantity, remove, cart verification	Fail	BUG-004
TC_05	Login, multiple products, cart changes, checkout	Pass	-
TC_06	Login, manage customer information, verify saved data	Pass	-
TC_07	Login, add address, select product, checkout, verify address	Fail	BUG-001, BUG-002
TC_08	Login, purchase product, order confirmation, order history	Pass	-
TC_09	Login, wishlist product to cart, checkout	Pass	-
TC_10	Login, browse category, add to cart, continue shopping, final cart	Pass	-

6. Defect Summary

Defect ID	Module	Severity	Status
BUG-001	Checkout - Billing Address	Medium	Open
BUG-002	Checkout - Billing Address	Low	Open
BUG-003	User Registration	Low	Open
BUG-004	Shopping Cart	Medium	Open
BUG-005	Search	Low	Open

Total defects: 5 (High: 0, Medium: 2, Low: 3). Open: 5.

7. Observations

Core flows such as login, wishlist, compare, cart, checkout and order history worked as expected. Input validation is weak in several forms (name, phone, ZIP code, cart quantity, search). No blocking defects were found.

8. Conclusion and Recommendation

All 10 test cases were executed. The application's main flows are stable, but the open defects show that input validation needs improvement. The failed test cases (TC_01, TC_02, TC_04, TC_07) should be retested once the defects are fixed, before the next release.
